- Species (النوع) can be divided into:
 1. Actual species (النوع الحقيقي)
 2. Relative species (النوع الاضافي)
- Genus (جنس) can be divided into:
 1. The Proximate (الجنس القريب)
 2. The middle (الجنس المتوسط)
 3. The remote (الجنس البعيد)
- Relative species can be divided into:
 1. The high species (النوع العالي)
 2. The lower species (النوع السافل)
 3. The middle species (النوع المتوسط)
- Differentia can be divided into:
 1. The nearer differentia (الفصل القريب)
 2. The distant differentia (الفصل البعيد)
 3. The establishing differentia (الفصل المقوم)
 4. The divisional differentia (الفصل المقسم)
- The “كلى” which has another “جنس” above, is called “النوع الاضافي” (relative species) as well because it is “نوع” for that higher “جنس”. Such as “حيوان” (in relation) to the growing substance (الجسم النامي).
- Generally, a “جنس” (genus) has another “جنس” above it, till “جوهر” which has no “جنس” above. The highest “جنس” is called الجنس العالي and the lowest is called الجنس السافل.
