

L 5

**Topic: *Dalalah***

**Section 6**

**Comparison between *Nahw* and Logic**

*Nahw* is for recognition of **words** ... but Logic is for recognition of some **meanings** because *mu'arrif* and *hujjah* deal with the meanings of those known apprehensions and affirmations...

... although transferring or receiving the profound meaning is not possible except through the word.

**Section 7:**

**Significations (دلالات)**

✓ **Signification** (دلالة) is when knowing something implicates to know another thing.

**Formulation** (وضع) is coinage of one thing for something else in a sense that knowing the first necessitates knowing the second, so *wad'* is a sort of signification.
