Lesson 116

Types of Division

(انواع القسمة)

- Types of Division (انواع القسمة):
Natural Division (القسمة الطبيعية) : Dividing a whole (كلّ)
Logical Division (القسمة المنطقية): Dividing a universal (كلى)
1. In the natural Division, if the body is divided into different parts and if they are the substantial part, they are called 'اجزاء طبيعية', e.g., water is oxygen and hydrogen. These particles are called natural or elemental particles. If the divisions are the rational parts, they are 'اجزاء عقلية', e.g., human is 'حيوان' and 'ناطق'. If the parts are artificial parts, they are called 'اجزاء صناعية', e.g., ink is water and dyestuff, etc.
 2. Logical Division (القسمة المنطقية), such as dividing the existent into materials and non-materials, and the difference is that in the logical Division, you can predicate the parts on their 'مقسم' and vice versa, such as 'human is animal' or 'this animal is human'.
